An automated supervision system for school issued computers that safeguards students from cyberbullying, predators, self-harm and inappropriate websites, among other threats.

A solution that teams with current content filters to provide knowledge of when and how users have compromised security.

A solution that supports responsible computer use, encourages students to be on-task and provides administrators with the ability to uphold Computer Acceptable Use Policies.

A solution that helps comply with the FCC 11-125 order requiring schools to monitor student use of computers.

A solution that supervises the use of the whole computer not just social media.

---

LearnSafe has given us a giant leap towards making a safer environment for kids and it’s paid for itself by allowing us to remove some of our worst fears. I wish this type of software was available years ago as it might have made a difference in people’s lives. It’s important to get this technology in schools.

LearnSafe allows you to further define and reinforce the boundaries for acceptable use.

LearnSafe detects and reports when students type or view unacceptable words and phrases.

The LearnSafe reporting system allows you to easily review and prioritize triggered screenshots.

With LearnSafe you’ll have clear data for intervention and be better equipped to promote desired behavior.

Mobile County Schools
CIO, David Akridge
